### **Course Description**

⇒ Health and safety technology and procedures are very important aspects of health and safety management , However , on their own , these will not provide a continuous improvement in health and safety and environmental performance , Health and safety enforcement agencies advise that failure of these systems account for only small percentages of accidents , The cause of most workplace accidents and incidents is directly related to human failure , Three thousand people are killed each day worldwide , Over 90% of these deaths are caused by unsafe behaviors of people in management and in the workforce , In this program you will look in-depth at the factors that impact on human failure :

- Organizational aspects that influence human failure
- Task factors that will increase or decrease human failure

- Individual factors that will impact on human failure
- How to develop a positive Safety Culture

### **Course Objective**

- ⇒ Describe the main elements of international standards for safety and health management including the International Labour Organisation (ILO) codes of practice and Occupational Health and Safety Management framework
- ⇒ Review the main hazards and methods of risk control for construction , chemical , biological , physical and psychological health

### **Who Should Attend?**
