Course Description

This dynamic and interactive training course is aimed at professionals who have, or will soon have, responsibility for managing and manipulating data using MS Excel on a day to day basis. The training course assumes zero knowledge, begins with an introduction to the Excel environment and ends with delegates being skilled in using 50+ MS Excel functions, sophisticated data management and charting techniques and advanced data analysis capability. Do you still think that Excel is a tool that is used only by people in your company's finance department? If so, you are wrong. It does have fantastic financial modeling capability but it offers so much more than that. Excel is not reserved for financial data. Everyone in middle to senior management manages some kind of data and hence the need to attend this course. This training course will feature:

- Advanced data analysis
- Both textual and numerical data
- Forecasting
- Advanced charting
- Scenario analysis

What are the Goals?

By the end of this training course, participants will be able to:

- Analyse relationships across information and data using MS Excel
- Generate data forecasts using MS Excel
- Organise your company's data in a more structured manner
- Analyse your data effectively using various MS Excel techniques
- Select the appropriate chart for your data
